Composition and resolution of forces are very important tools in engineering mechanics to solve the problems where multiple forces are acting. Depending on the types of problem, we will apply the basics of composition and resolution of forces. Further, composition and resolution of forces will be used in various engineering mechanics problems.

Forces are vectors and as such, any operation that can be performed on vectors can be performed on force vectors. The resolution of vectors is one such operation. The method of resolving force vectors into their x- and y-components is discussed in great detail.
