The general solution of the differential equation $dr/dt = -r$ is $r(t) = r_0 e^{-t}$ where $r(0) = r_0$ is the initial amount. (a) We have $r(t) = r_0 e^{-t}$ and $r(5230) = r_0/2$. Thus $r_0 2 = r_0 e^{-.5230}$

How to solve separable differential equations To find explicit solutions of separable differential equations, we use a technique familiar from calculus. To illustrate the method, consider the differential equation $dy/dt = 2y$. There is a temptation to solve this equation by simply integrating both sides of the equation with respect to t .

Student Solutions Manual for Blanchard/Devaney/Hall's ... Students learn how differential equations are formulated and interpret their meaning to applied models. A three-pronged qualitative, numeric, and analytic approach stresses how to visualize differential equations geometrically, use technology to investigate the behavior of solutions, and predict the behavior of solutions as they apply to models.

(PDF) Solutions Manual for Differential Equations and ...

As for the solution manual itself it is pretty standard. It has the solutions to the odd problems. It walks you through the steps, and thankfully, unlike many solution manuals does not skip a lot of steps. When they do, it is something that is really basic that a student taking differential equations should be able to follow.
