This is the first book to specifically focus on semiconductor nanocrystals, and address their synthesis and assembly, optical properties and spectroscopy, and potential areas of nanocrystal-based devices. The enormous potential of nanoscience to impact on industrial output is now clear. Over the next two decades, much of the science will transfer into new products and processes. One emerging area where this challenge will be very successfully met is the field of semiconductor nanocrystals. Also known as colloidal quantum dots, their unique properties have attracted much attention in the last twenty years.

The book gives an extended review of theoretical and observational aspects of neutron star physics. With masses comparable to that of the Sun and radii of about ten kilometres, neutron stars are the densest stars in the Universe. This book describes all layers of neutron stars, from the surface to the core, with the emphasis on their structure and equation of state. Theories of dense matter are reviewed, and used to construct neutron star models. Hypothetical strange quark stars and possible exotic phases in neutron star cores are also discussed. Also covered are the effects of strong magnetic fields in neutron star envelopes.

In Buitenpost gaat Dan Richards op zoek naar buitenposten, naar plekken waar stilte, afzondering, avontuur of spiritualiteit te vinden zijn. Waarom worden we aangetrokken door afzondering en wildernis? En wat is het met sommige plekken en landschappen dat ze schrijvers, kunstenaars en musici hebben geïnspireerd en nog steeds inspireren? In de voetsporen van avonturiers en stiltezoekers reist Richards van het Cairngormgebergte in Schotland naar de woeste natuur van IJsland. Hij bezoekt ijskoude spooksteden in Spitsbergen, Shinto-heiligdommen in Japan, de woestijn van Utah, maar ook de schrijfhut van Roald Dahl en een in de Noord-Atlantische Oceaan gelegen vuurtoren. Richards schrijft zo verleidelijk, tijdens het lezen voel je doorlopend de behoefte zelf een rugzak om te gorden en op pad te gaan.
