Let's see the first of our descriptive statistics examples. Example 1: Descriptive statistics about a college involve the average math test score for incoming students. It says nothing about why the data is so or what trends we can see and follow. Descriptive statistics help you to simplify large amounts of data in a meaningful way. It reduces lots of data into a summary. Example 2:

For example, if your report includes a bar graph of the distribution of test scores for a chemistry class, and those scores are 97.56, 97.52, 97.46, and 97.61, your x axis would be each of the students and your y axis would start at 97 and go up to 98. This would highlight the differences in the students' scores.
