Published between 1862 and 1932, and reissued here in multiple parts, this monumental calendar of documents remains an essential starting point for the serious study of Tudor history. An experienced editor of historical texts, John Sherron Brewer (1809-79) had no prior training in the history of the period, yet he brought to the project the necessary industriousness and an impeccable command of Latin. Four volumes appeared before his death, whereupon James Gairdner (1828-1912), his former assistant, took up the editorial reins. Continuing Brewer's method of ordering chronologically all available documents from 1509 to 1547, and reproducing some passages while paraphrasing or omitting others, Gairdner brought the project to its conclusion, aided himself by R. H. Brodie (1859-1943) in preparing the later volumes. Part 2 of Volume 3 (1867) has been split into two for this issue: this first half covers the period from July 1521 to 21 October 1522.

Assignment Problems is a useful tool for researchers, practitioners, and graduate students. It provides a comprehensive treatment of assignment problems from their conceptual beginnings in the 1920s through present-day theoretical, algorithmic, and practical developments. The authors have organised the book into 10 self-contained chapters to make it easy for readers to use the specific chapters without having to read the book linearly. The topics covered include bipartite matching algorithms, linear assignment problems, quadratic assignment problems, multi-index assignment problems, and many variations of these problems. Researchers will benefit from the detailed exposition of theory and algorithms related to assignment problems, including the basic linear sum assignment problem and its variations. Practitioners will learn about practical applications of the methods, the performance of exact and heuristic algorithms, and software options. This book also can serve as a text for advanced courses in discrete mathematics, integer programming, combinatorial optimization, and algorithmic computer science.
