from the database. We can get same results by writing different sql queries. But use of the best query is important when performance is considered.

SQL Query Tuning or Query Optimization

SQL performance tuning is the process of improving the performance of SQL statements. You want to make sure that SQL statements run as fast as possible. Fast and efficient statements take up fewer hardware resources and perform better. In contrast, an unoptimized inefficient statement will take longer to complete and take up more computing power.

Performance Tuning in SQL (How to Optimize Performance!)

Read Book Sql Tuning

SQL Tuning provides an essential next step for SQL developers and database administrators who want to extend their SQL tuning expertise and get the most from their database applications. There are two basic issues to focus on when tuning SQL: how to find and interpret the execution plan of an SQL statement and how to change SQL to get a specific alternate execution plan.

SQL Tuning: Generating Optimal Execution Plans: Tow, Dan ...

SQL Tuning: Execution Plans in SQL Server By the way: the Execution Plan tool in SQL Server can be useful for creating indexes. Its main function is to graphically display the data retrieval methods chosen by the SQL Server query optimizer.
