Example 1: Let us consider an example: What is the probability of getting a 5 when a die is rolled and probability of not getting 5?

Solution: Total Number of possible outcomes while rolling a die is 6. The number of ways, that a 5 occurs while rolling a die is 1.

Hence We can calculate the Single Event Probability using the formula :

Actively solving practice problems is essential for learning probability. Strategic practice problems are organized by concept, to test and reinforce understanding of that concept. Homework problems usually do not say which concepts are involved, and often require combining several concepts. Each of the Strategic Practice documents here contains a set of strategic practice
